Project Title: Entertainment Guide

Student Name: Akhil Pulipati
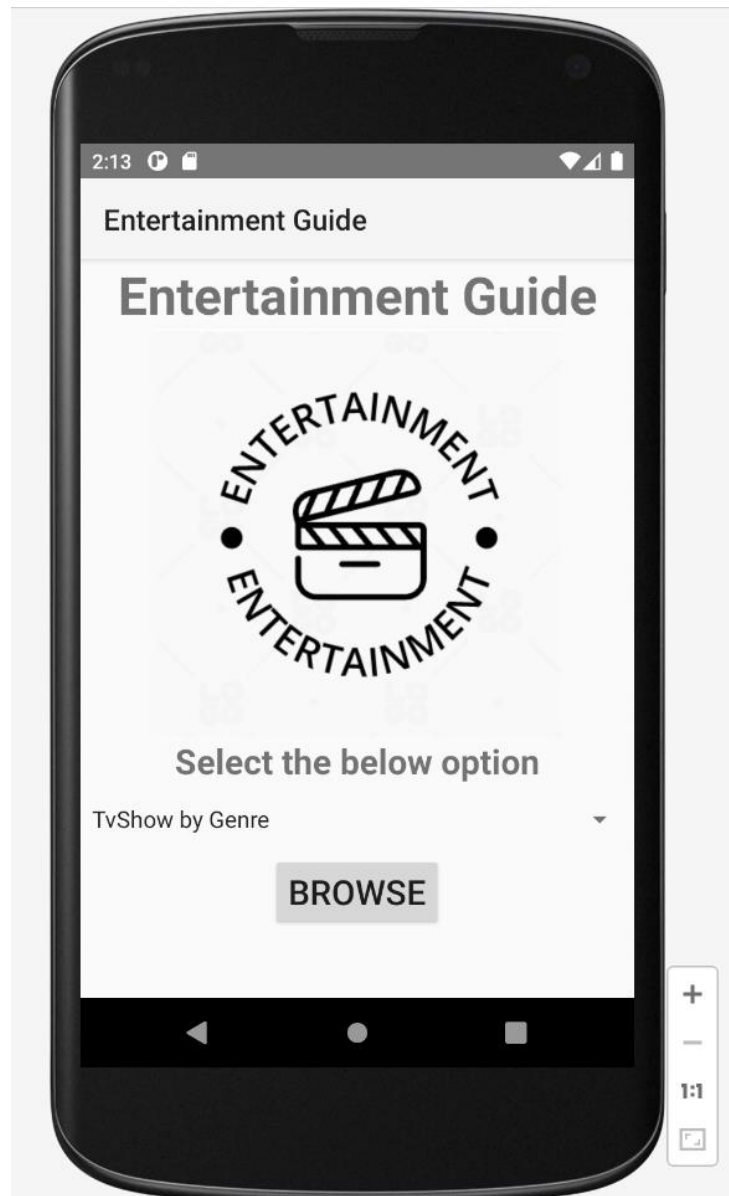

Project Description:

This App is about acting as a guide to user to find a movie or tv show based on genre, language, and year of release. It also shows the user from where to watch the movie or tv show.

App Description:

The Home screen consists of Title, Image, Spinner with six options and a button. After choosing a option from the six it leads to another page where it has a title and expandable list related to the selected option. Now we need to select a title from the expandable list-view, and it leads to the selected title page where it has name of selected title, Image of the title, content of the title and a button on click it leads to the website where we can watch the selected entertainment title.

Instructions for how to use the application:

1. In the main screen you will have app title, image, spinner, and a browse button.

2. If you click on the spinner, you will get six options i.e., TV show by Genre, TV show by Language, TV show by Year, Movie by Genre, Movie by Language and Movie by Year.

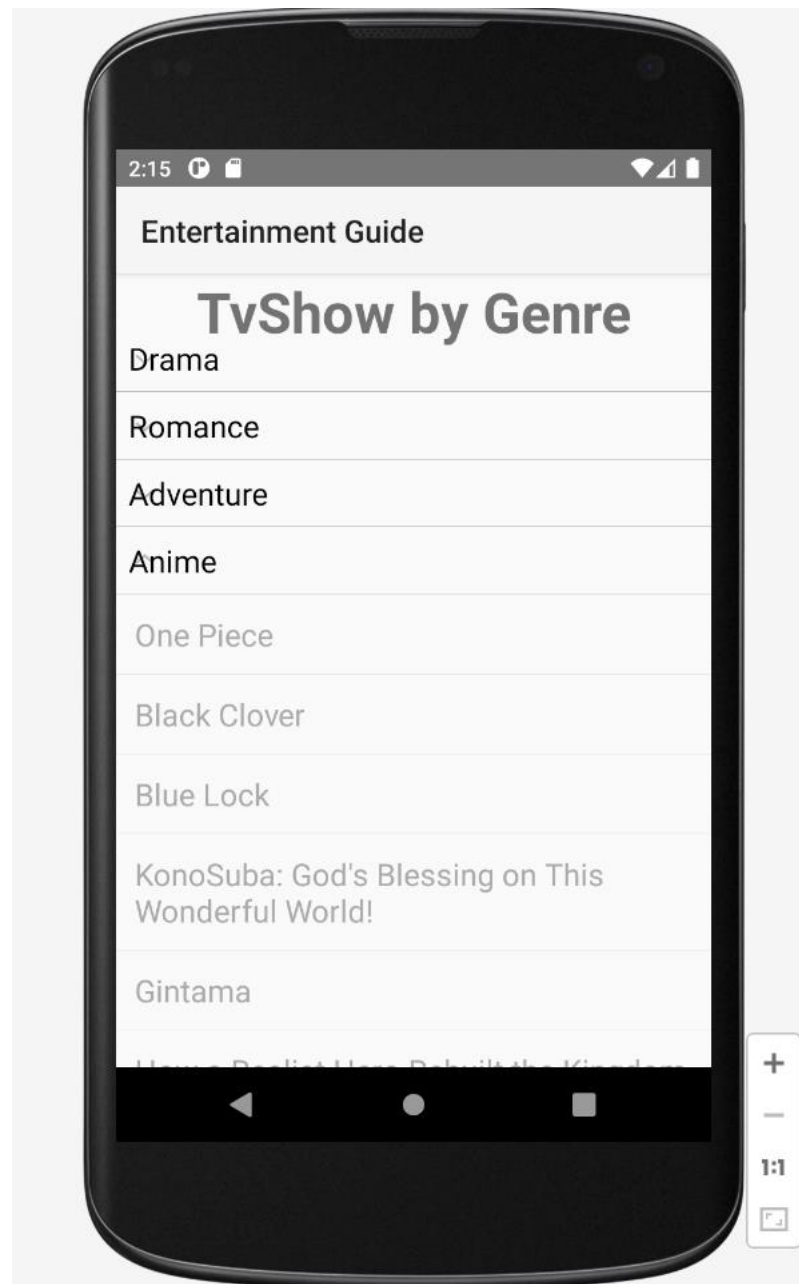

After selecting one of the options click the browse button.

3. Clicking the browse button, it leads to the page where it has an expandable list view with options related to the selected option. For example, if we select Tv Show by Genre then it leads to Tv Show by Genre page where it has an expandable list with all the genres such as action, drama, anime etc.

4. Now we need to select a title from the given genre based on the user's choice.

5. After clicking on the title based on the user's choice it leads to the selected entertainment screen where it has selected entertainment title, Image, Info about that title and a button with link to watch the selected entertainment title.
